The **“zero-gravity” position**, as found on the Alizé sunlounger, is **perfect for relaxing** and is widely recommended by medical professionals. It is this position, with the legs positioned slightly above the heart, that the body adopts in a weightless state. The position was named by NASA in the 1970s. The sensation of gravity is reduced seven-fold, similar to when the body is floating in water.

The legs are raised and the thighs and torso form an angle of 127 degrees, thereby :

- Significantly easing pressure on the lower back and spine.
- Reducing tension in the lower back muscles.
- Promoting improved blood flow in the legs and reducing strain on the heart.
- Freeing up the rib cage and allowing the lungs to expand, which improves oxygenation.

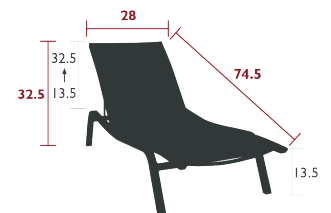

**Zero gravity is reached by raising the feet (7°) and raising the backrest to the maximum (45°).**
